

Week Report 1

Slack Screenshot

Github Screenshot

The screenshot shows the GitHub profile page for user L33honcho. The browser address bar displays 'github.com/L33honcho?tab=repositories'. The profile header includes the username 'L33honcho', a search bar, and navigation tabs for Overview, Repositories (selected), Projects, Packages, and Stars. The Repositories tab shows a search bar with the placeholder 'Find a repository...', a 'New' button, and filters for 'Type' and 'Sort'. A repository named 'cis106' is listed as 'Public' with the description 'fall 26 linux fundamentals', updated 10 minutes ago, and a 'Star' button. The profile picture is a circular avatar with an orange and white pixelated design. Below the profile picture is the name 'L33honcho' and an 'Edit profile' button. A rocket icon indicates the user 'Joined last week'. The footer contains links for Terms, Privacy, Security, Status, Community, Docs, Contact, Manage cookies, and Do not share my personal information, followed by the GitHub logo and copyright notice '© 2026 GitHub, Inc.'

Discussion Board Screenshot

The screenshot shows a discussion board post by user Leo Angelo Maldonado, posted 'an hour ago, at 9:57 PM'. The post text reads: 'Something I learned from watching the videos shown is how the open source movement was created. I found it amusing how open source was started based off a new printer source code not being accessible to Richard. Due to being rejected access to the source code for the printer Robert would quit his job and create GNU. I also found it interested that the US government would decide open source 20% of their custom code. I would hope that those custom codes don't go back to anything that's supposed to be kept a secret. Especially since there was an issue back in 2014 where users to apps and websites had their personal data accessed due to openssl not having a big enough team to work full time on the code. What I also found interesting about open source is that a ton of people are using the codes to make beneficial changes for these companies without any kind of pay. Big corporations that are allowing people to make changes to their code should be able to pay the users something. Especially if the code that's been added provides substantial benefits for other users through the app or website.'

Acknowledgements

- By submitting this assignment I Leo Angelo Maldonado acknowledge that I have read the syllabus or home page of the course

- I also acknowledge that I have written down any questions that I have for the professor and will ask them in class or via Slack
- I also acknowledge that I am aware that the final exam is In Person
